

# Meade STELLA WI-FI Adapter Connectivity

To wirelessly control your telescope, you would need the following:

- an Android/iOS tablet or smartphone device where to install the SkySafari Plus/Pro APP
- the SkySafari Plus/Pro APP installed on your device needed to remotely control your telescope
- the STELLA WI-FI adapter
- a Meade #505, #507 or USB A/B type cable to connect STELLA to your telescope
- a Meade telescope with an Audiostar, Autostar, Autostar II or Autostar III handset

Please refer the diagram below for the type of cable you would need to connect your Meade telescope to the STELLA WI-FI adapter. Which cable you need would depend on the type of handset you have. Please note that the Audiostar handset is backwards compatible to the Autostar #497 handset. This does not apply to the Autostar II and Autostar III handsets that are exclusive.
